

Optimization of On-Farm Practices in Response to Urbanization Pressures on Water Rights

Stephen Smith, PhD

Regenesis Management Group

Colorado, USA

<https://www.regenmg.com>

Presentation:

- Regenesis MG, the research team, and the cooperation.
- Background on western water rights under prior appropriation.
- Consideration of alternative farming practices.
- Implementation strategies.
- Proof of concept projects.
- Discussion / questions.

Who we are:

Underpinned by researchers:

With USDA ARS, we work together under a **CRADA** – a cooperative research and development agreement – a private / government partnership to develop and deploy intellectual property.

Dr. Tom Trout is our research leader and he is here at the conference – speaking tomorrow.

Ag to urban water transfers:

- Driven by western U.S. population growth and municipal interests in developing a safe yield with their water supplies.
- Too often transfers are accomplished with “**buy and dry**” (**permanent dry up of the farm**) strategies.
- Question: can we avoid “buy and dry”?
- With SWIIM, some farmers will evaluate their future operations as a **consumptive use (CU) water budget** and ask themselves if they wish to adopt a package of changed practices in order to see a new and relatively low risk revenue stream added into their existing operations.

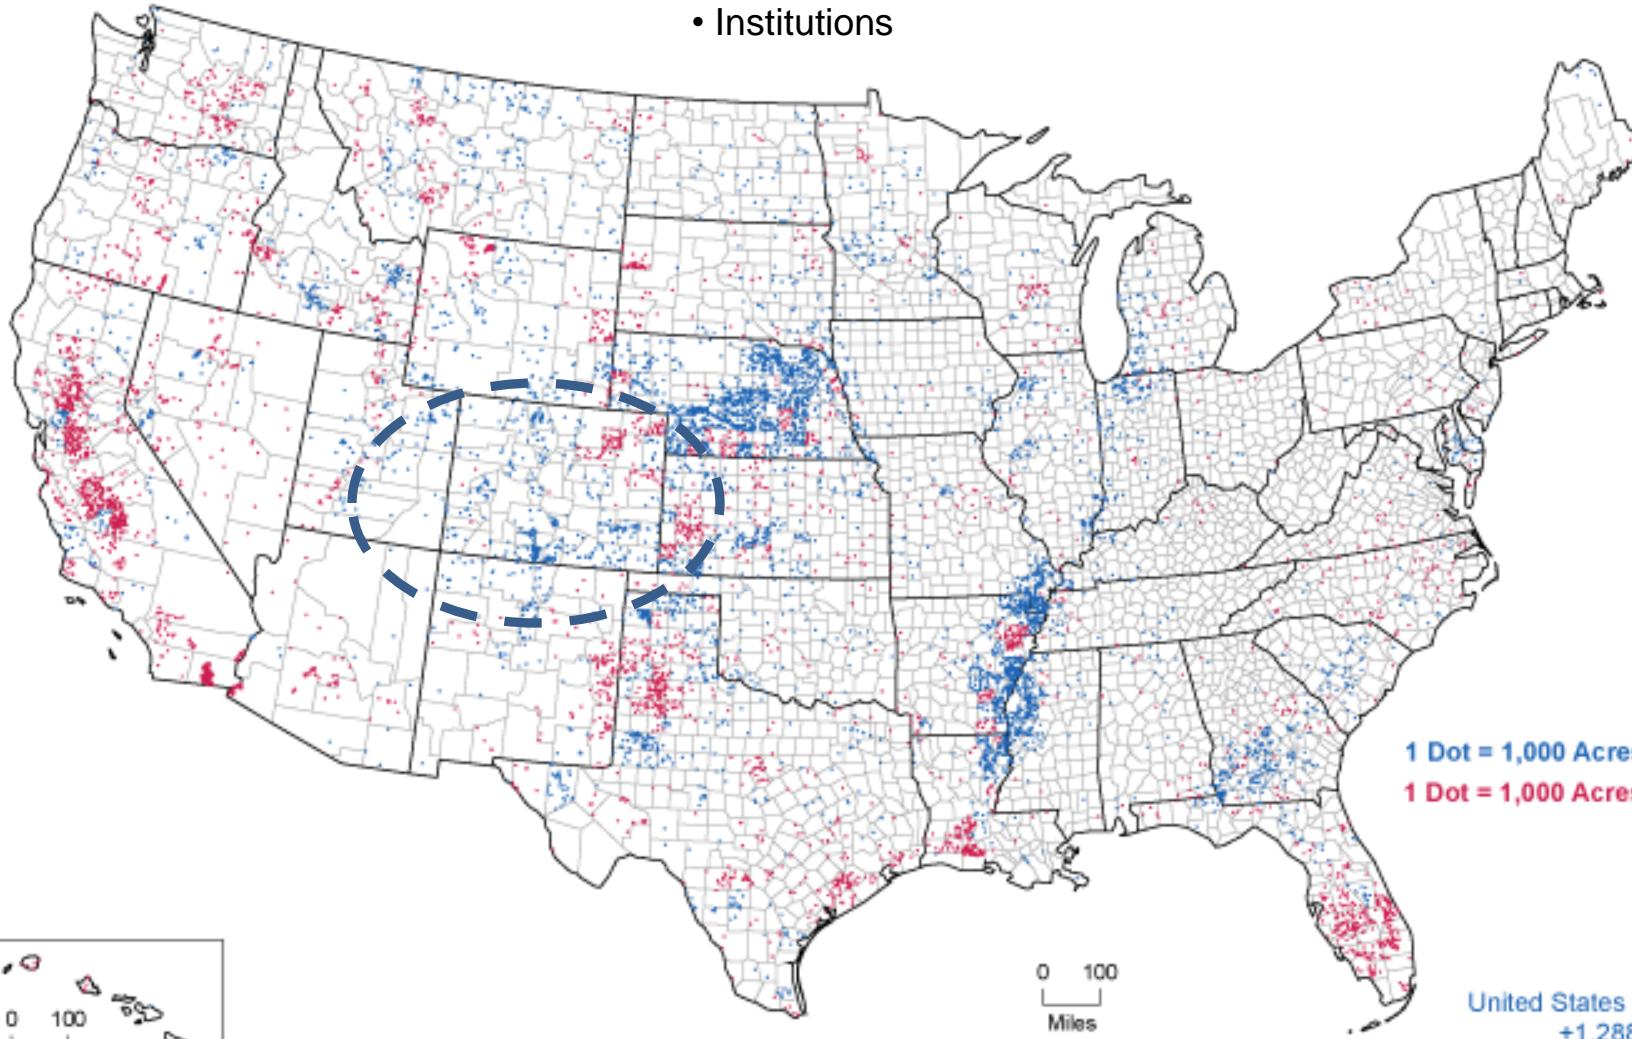

0 200
Miles

Irrigated Land - Change in Acreage: 2002 to 2007

Reductions in irrigated agriculture due to:

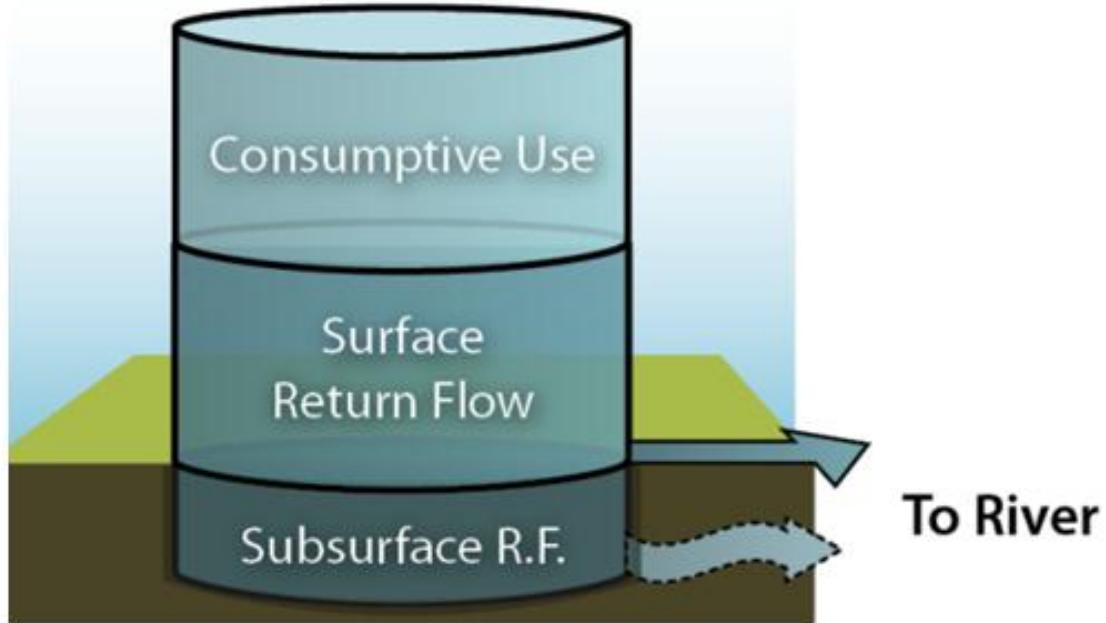

- Urbanization
- Declining aquifers
- Institutions

1 Dot = 1,000 Acres Increase
1 Dot = 1,000 Acres Decrease

United States Net Increase
+1,288,069

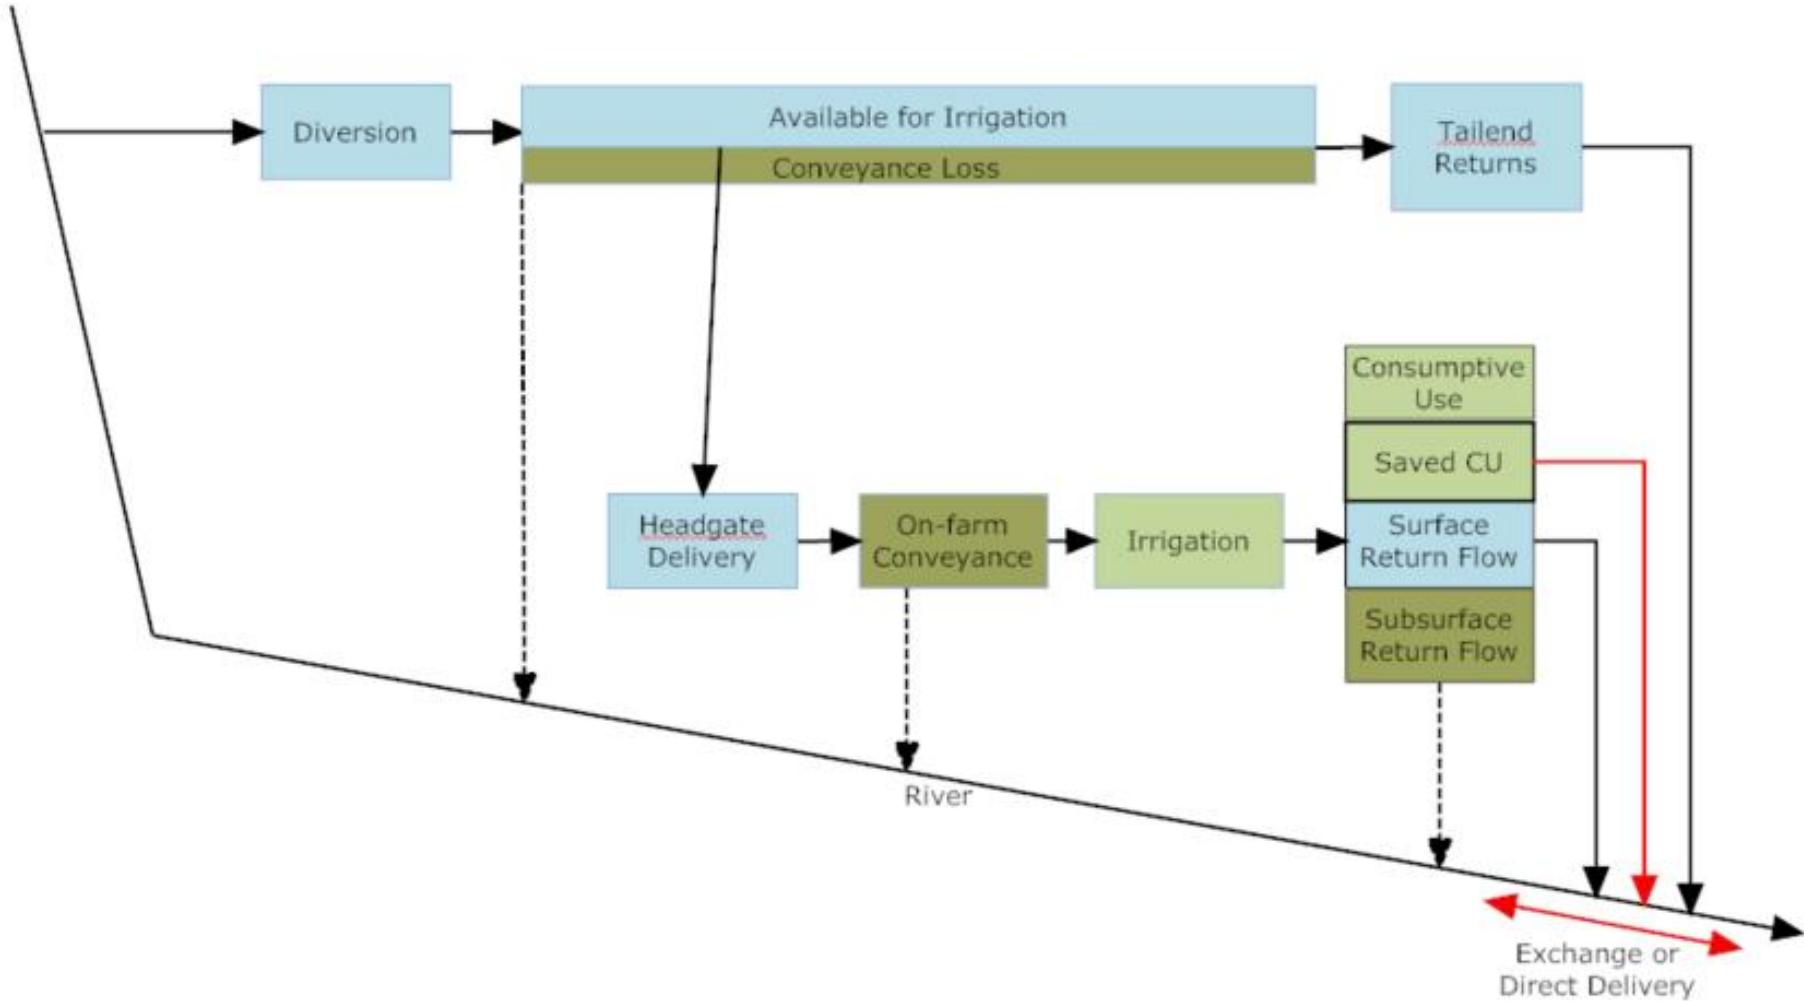

Quantification of Historic Consumptive Use (CU) Water

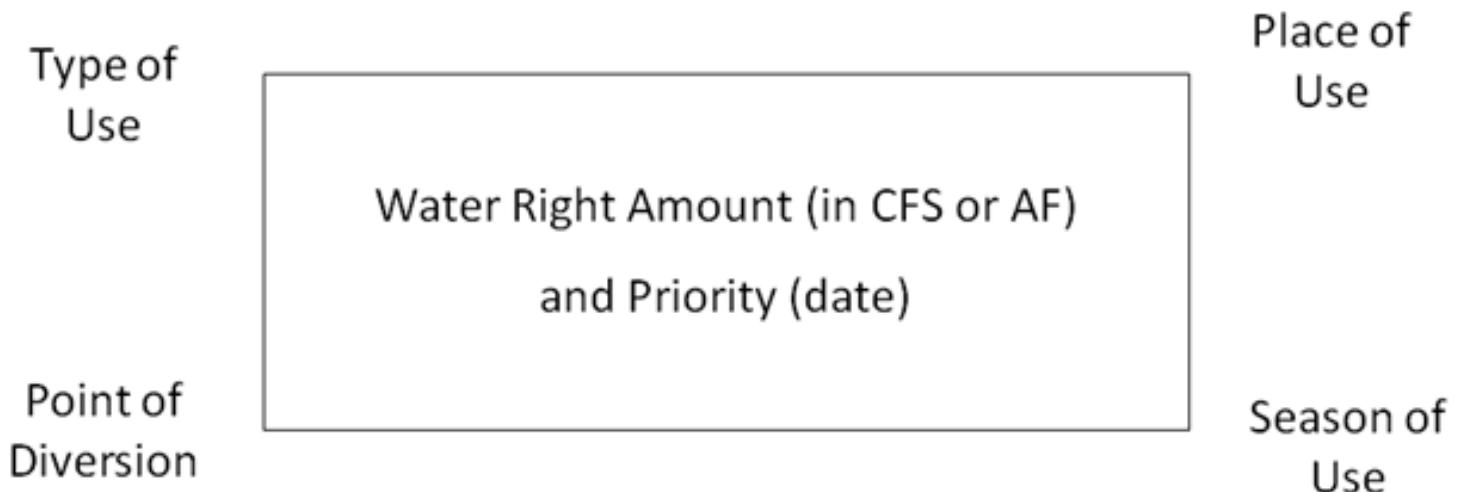

Key points:

Return flows are obligated to the river in the historic pattern of time, place, flow, and volume. Return flows are some else's water right.

A farmer cannot increase their irrigation efficiency and then consumptively use more water because that “saved water” belongs to someone else on the river.

Direct Flow or Storage Water Right

Decreed Water Rights under Prior Appropriation

Sustainable Water and Innovative Irrigation Management[®]

SWIIM is a patent-pending technology package:

- A mathematical optimization.
- GIS mapping of the farm.
- SCADA-based monitoring.
- Wireless communications.
- Internet, server-based delivery of software.
- Instrumentation:
 - Water measurement.
 - Soil moisture measurement.
 - Remote sensing.

SWIIM must be:

- Practical.
- Affordable.
- Functional.
- Transparent (to other water users and the State regulators).

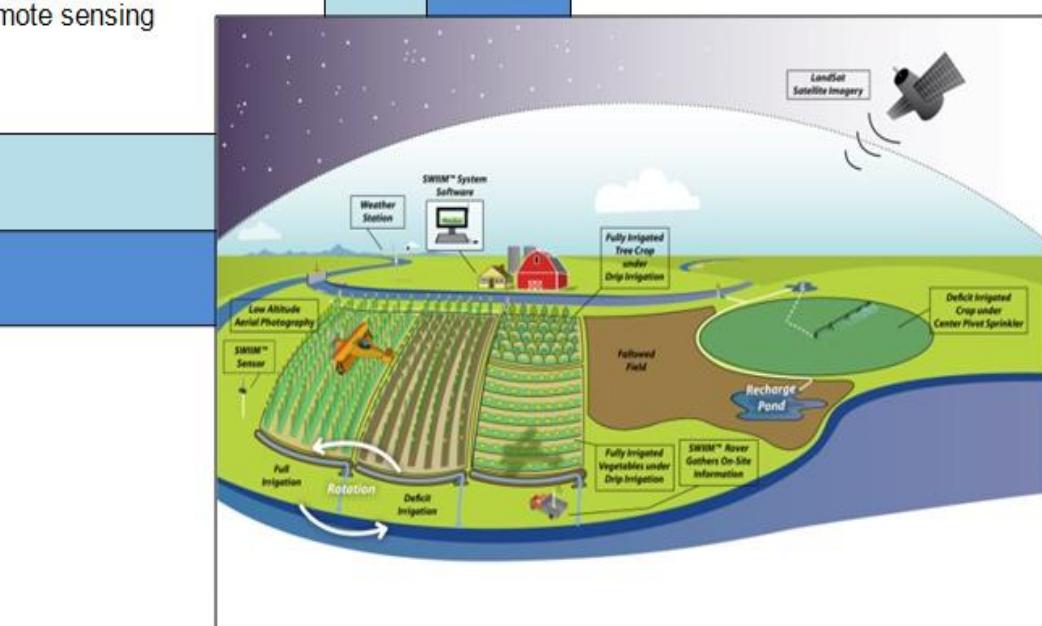

SWIIM™ System

SWIIM Planner

GIS farm data entry
Historic net returns
Acceptable practices
Mathematical optimization

SWIIM Manager

SCADA Monitoring
Water balance reporting
Soil moisture sensing
Remote sensing

Operational simulation:

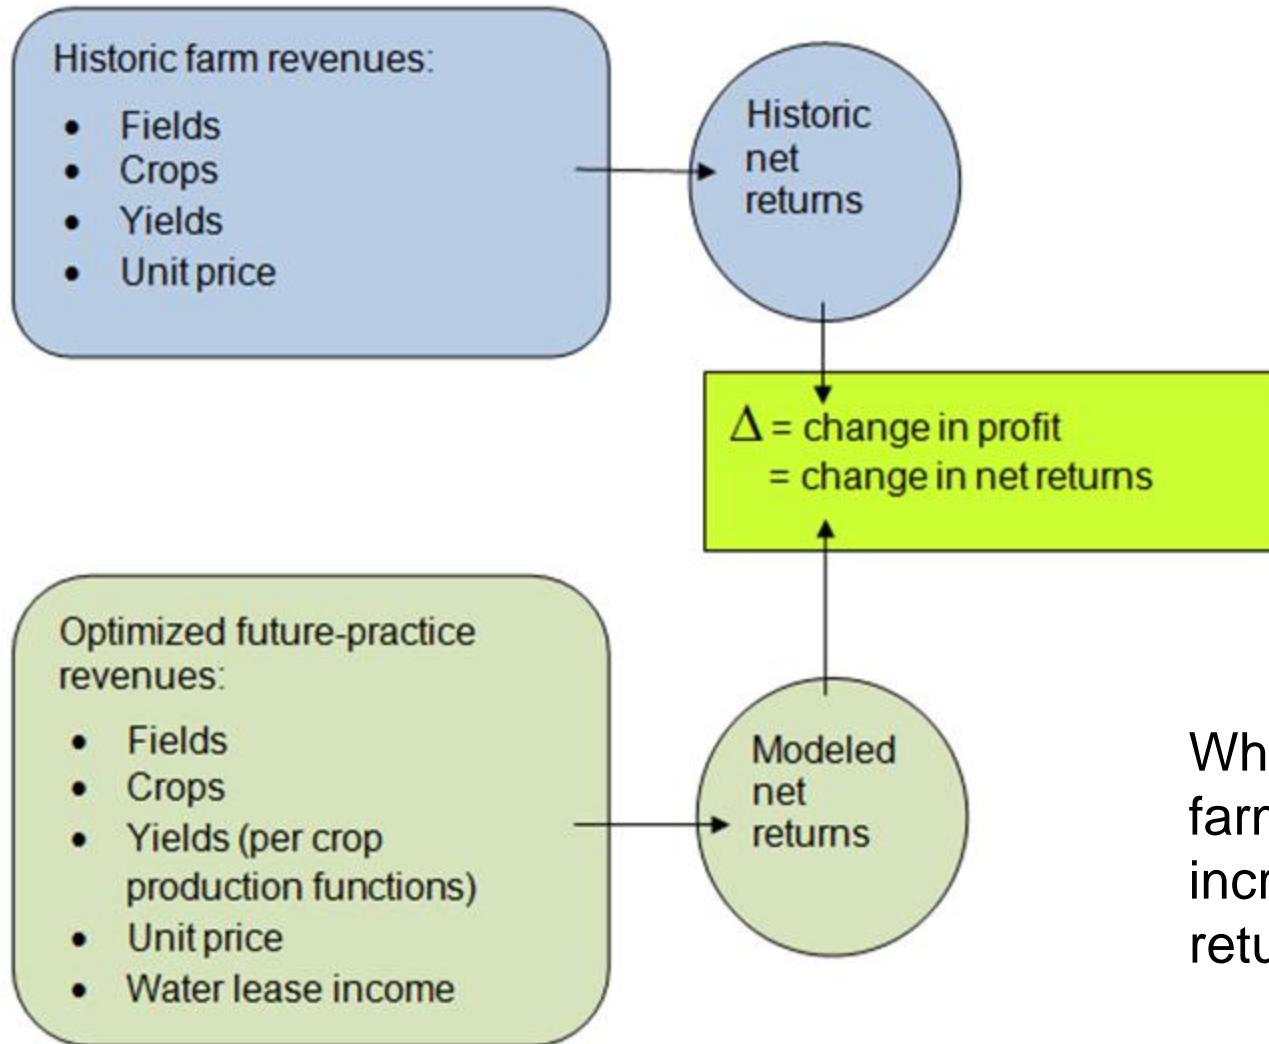

- Fields (GIS interface).
- Crops.
- Farming practices.
- Input costs.
- Crop prices.

<http://www.nass.usda.gov/>

Mathematical optimization:

- Objective function.
- Constraints.
- Decision variables.
- Parameters.

The objective function maximizes the net return to the farming operation given the constraints, decision variables, and parameters.

What might the farmer do with the increased net returns?

Farm improvements?
EQIP?

Potential for changed farming practices:

- Deficit irrigation of selected crops.
- Crop rotations.
- Introduction of new crops including perennial crops.
- Permanent fallowing or rotational fallowing.
- Introduction of dryland crops.
- Continued full irrigation of selected crops.
- Combinations of the above.

What is
deficit irrigation?

Deficit irrigation ...

Irrigation that allows stress in a significant fraction of the (field) at times during the season.

– Marshall English, Oregon State Univ.

Deliberately tolerating stress for maximizing the productivity of water. -- Sam Geerts, Univ. of Leuven, Belgium

Irrigation at a level under the expectation of reduced crop yield with economics justifying the deficit. -- Freddie Lamb, Kansas State Univ.

Help

SWIM® PLANNER

MEASURE AREA

Allows you to measure areas on the map.

To measure an area

- Left click on the **Measure Area** tool to toggle the Measure Results window on.
- In the **Select Units** dropdown list, select the units you wish to use for your measurement.
- Left click a starting point in the map for your measurement.
- Continue to click intermediate points around the perimeter of the area you wish to measure.
- Double click the last point on the perimeter (you don't have to click the point you started on).
- View the area and perimeter measured in the Measure Results window.

Note:
The 'Measure Results' window is dockable. The window can be dragged around on the screen as it floats over the map.

Crops

Select Crops You Are Willing to Grow

Select the Crops you are willing to grow and specify the minimum and maximum acreage of a crop you would require. Mark any irrigated crops you are willing to deficit irrigate.

Once you've selected crops you are willing to grow in the future, click 'Next' to more specifically assign crops by Field.

Will Grow?

Crop Type

+ Fully Irrigated

- Deficit Irrigated

Crops	Crop Name	Min Area (ac)	Max Area (ac)
<input checked="" type="checkbox"/>	Corn	10	287
<input type="checkbox"/>	Corn - silage	0	287
<input checked="" type="checkbox"/>	Winter Wheat	0	287
<input type="checkbox"/>	Barley	0	287
<input type="checkbox"/>	Alfalfa	0	287
<input checked="" type="checkbox"/>	Pinto Beans	0	287
<input type="checkbox"/>	Sugarbeets	0	287

A characterization of a full single-farm SWIIM® implementation.

As to the irrigation system:

**“Do not get wedded to a technology.
It’s a dance.”**-- Jack Keller

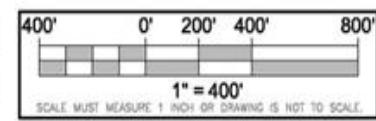

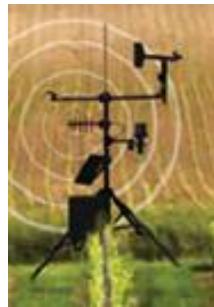

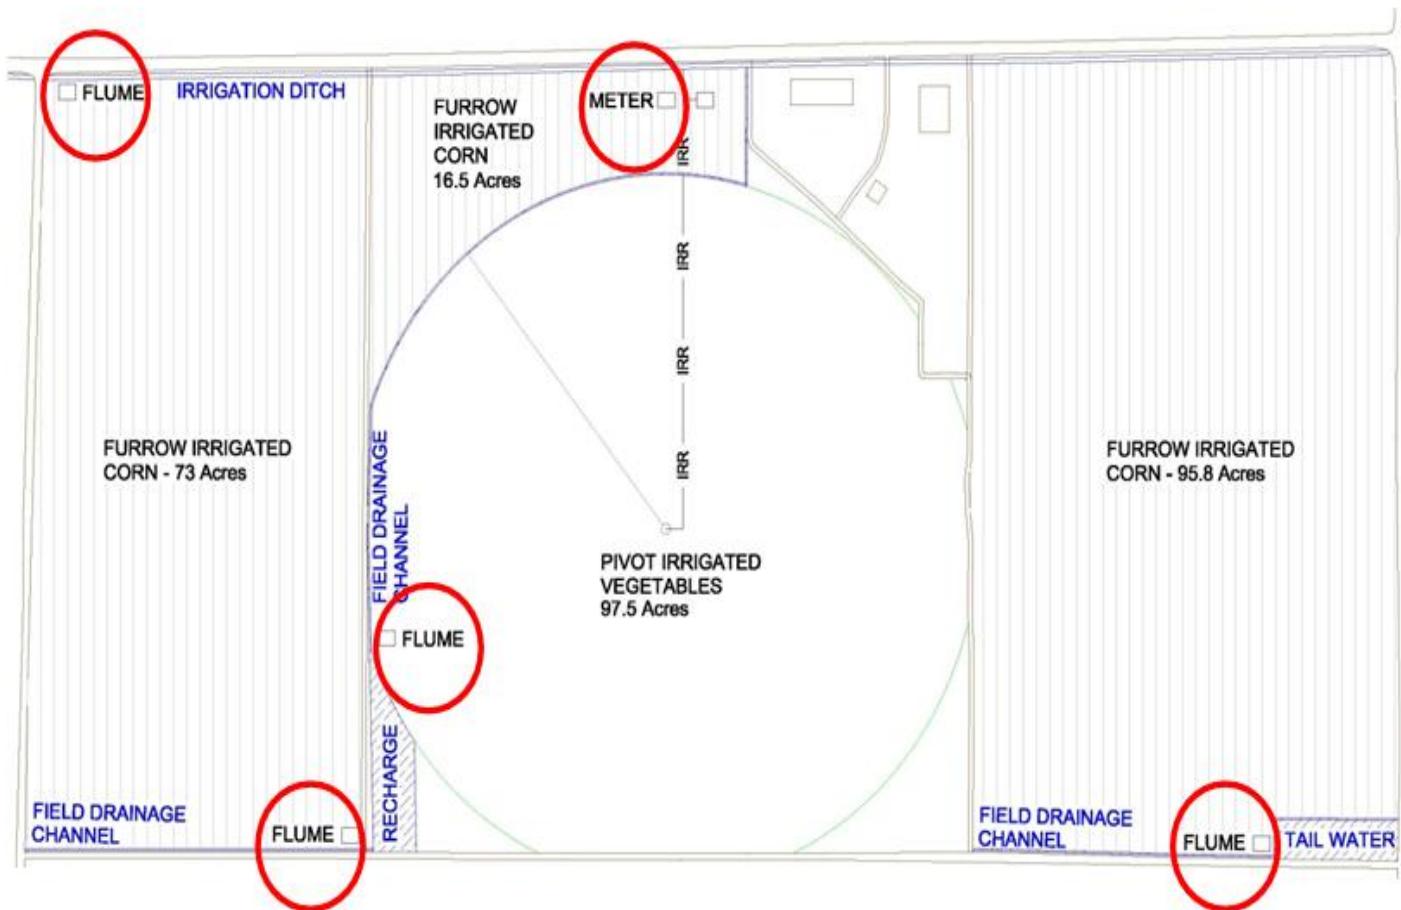

Instrumentation:

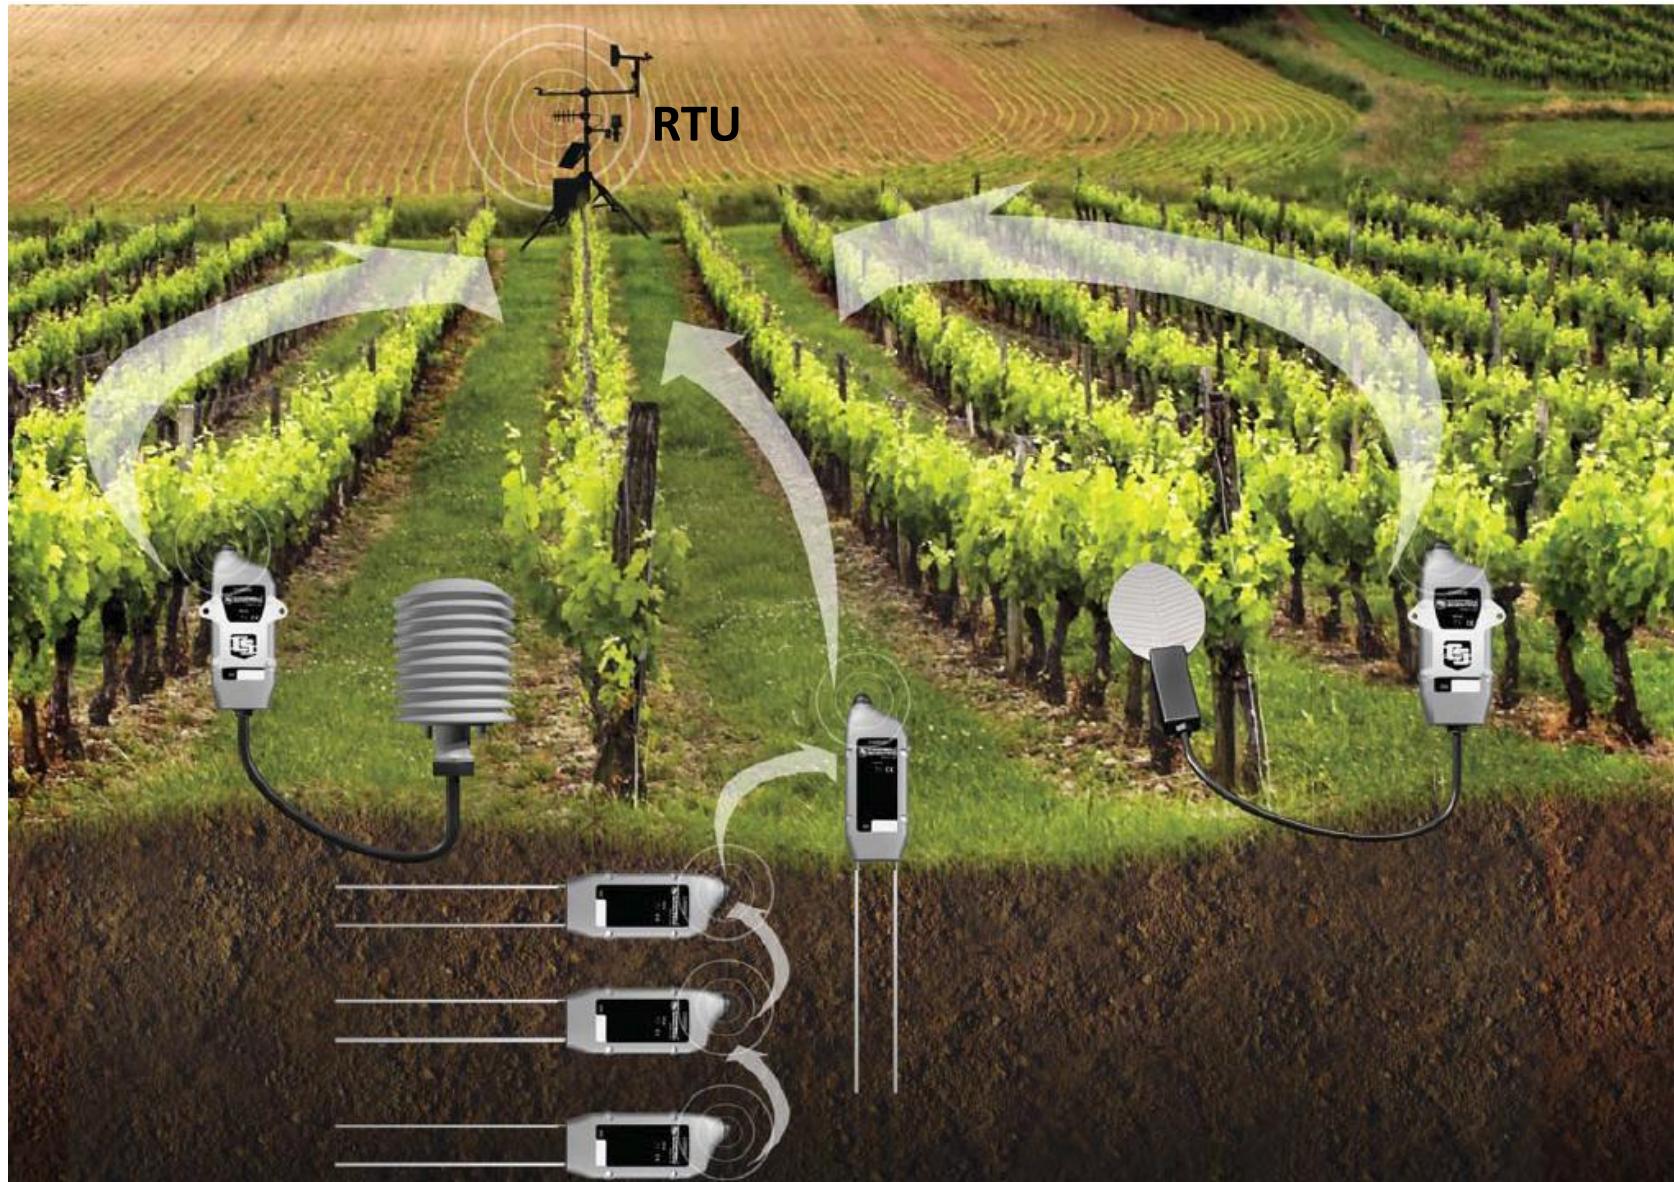

- Weather stations.
- Flow measurements.
- Soil moisture monitoring.
- Ground truth for stress conditions.

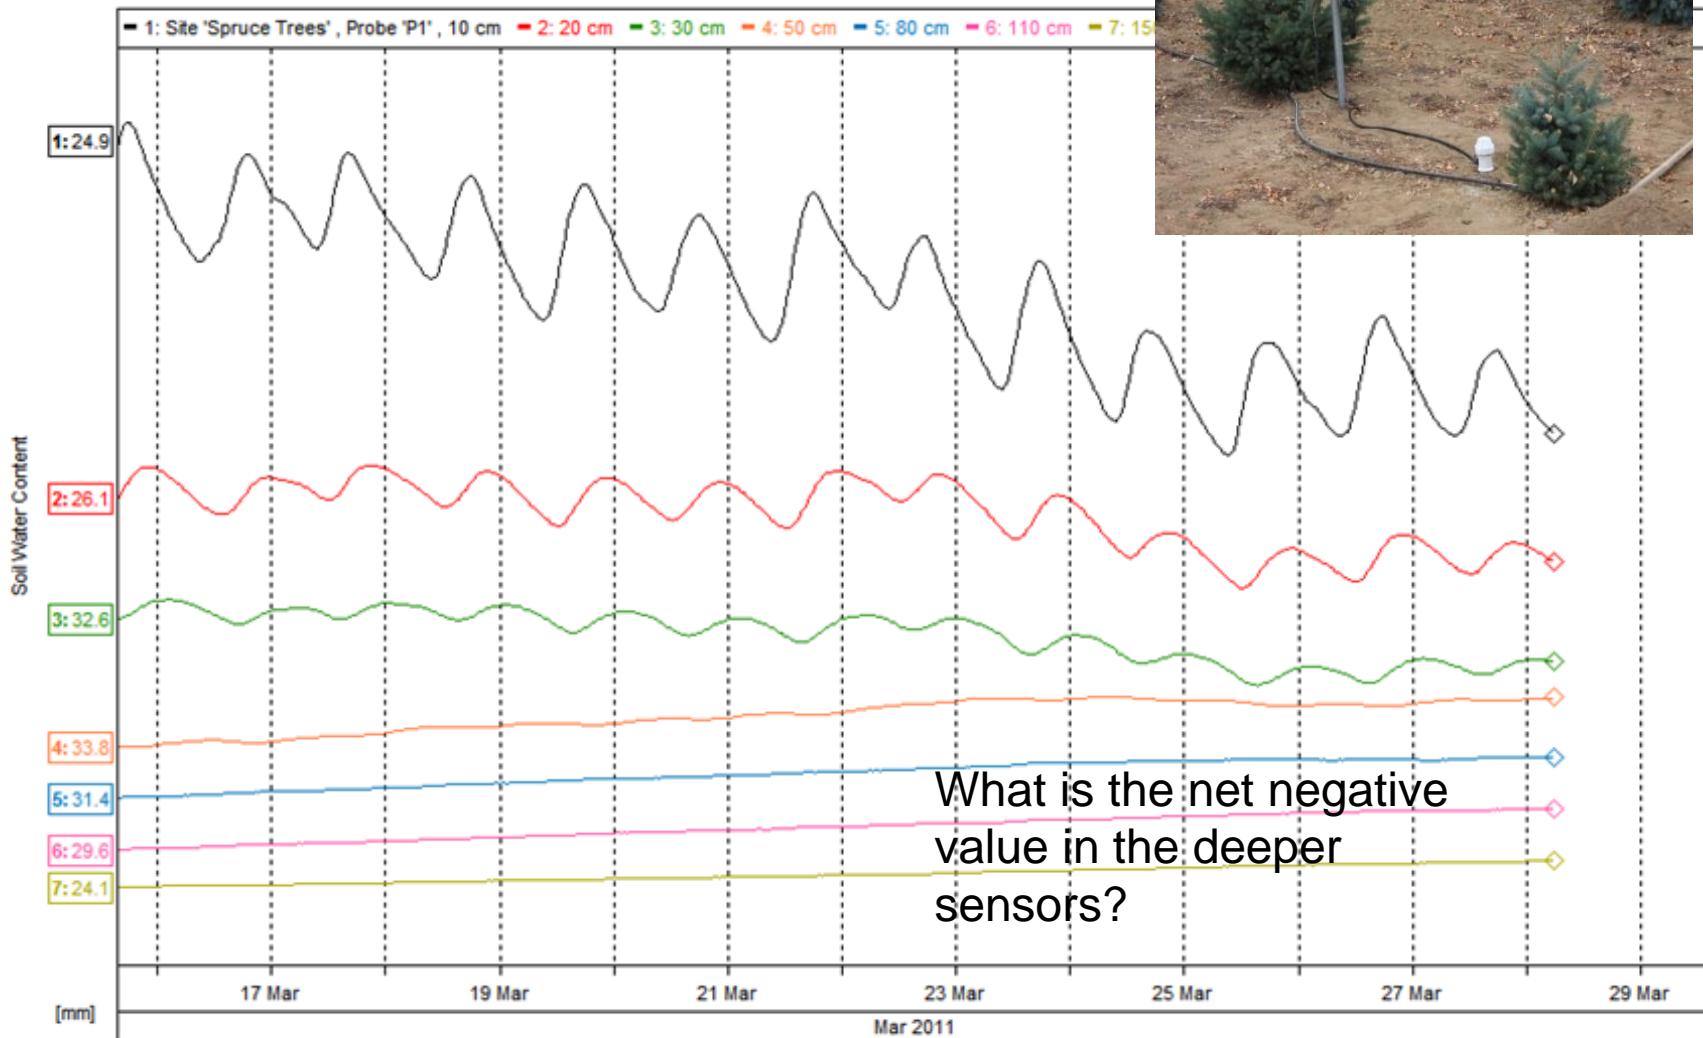

GeoVantage strut mount and setup for Cessna 150, 172, and 182.

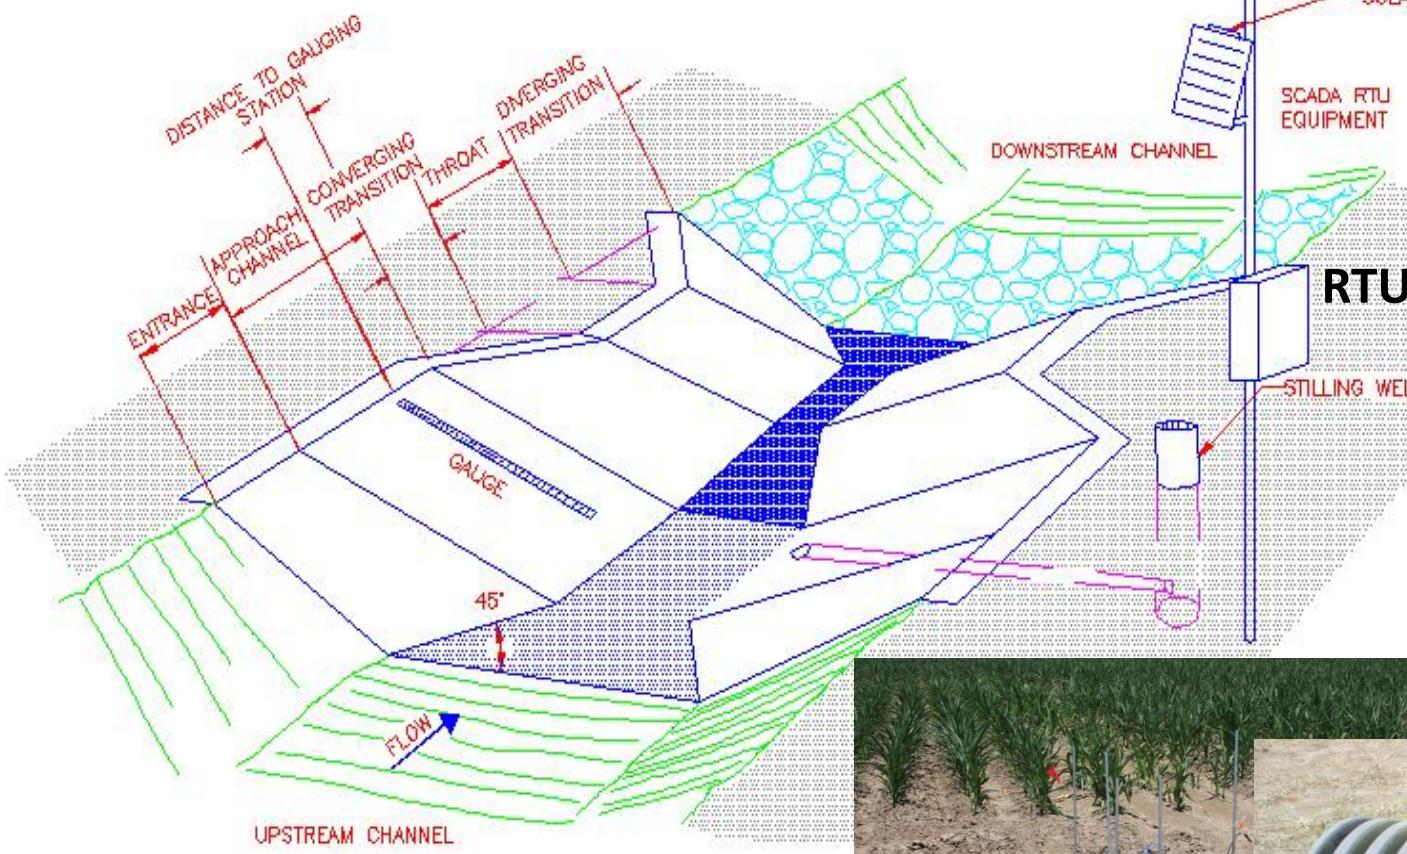

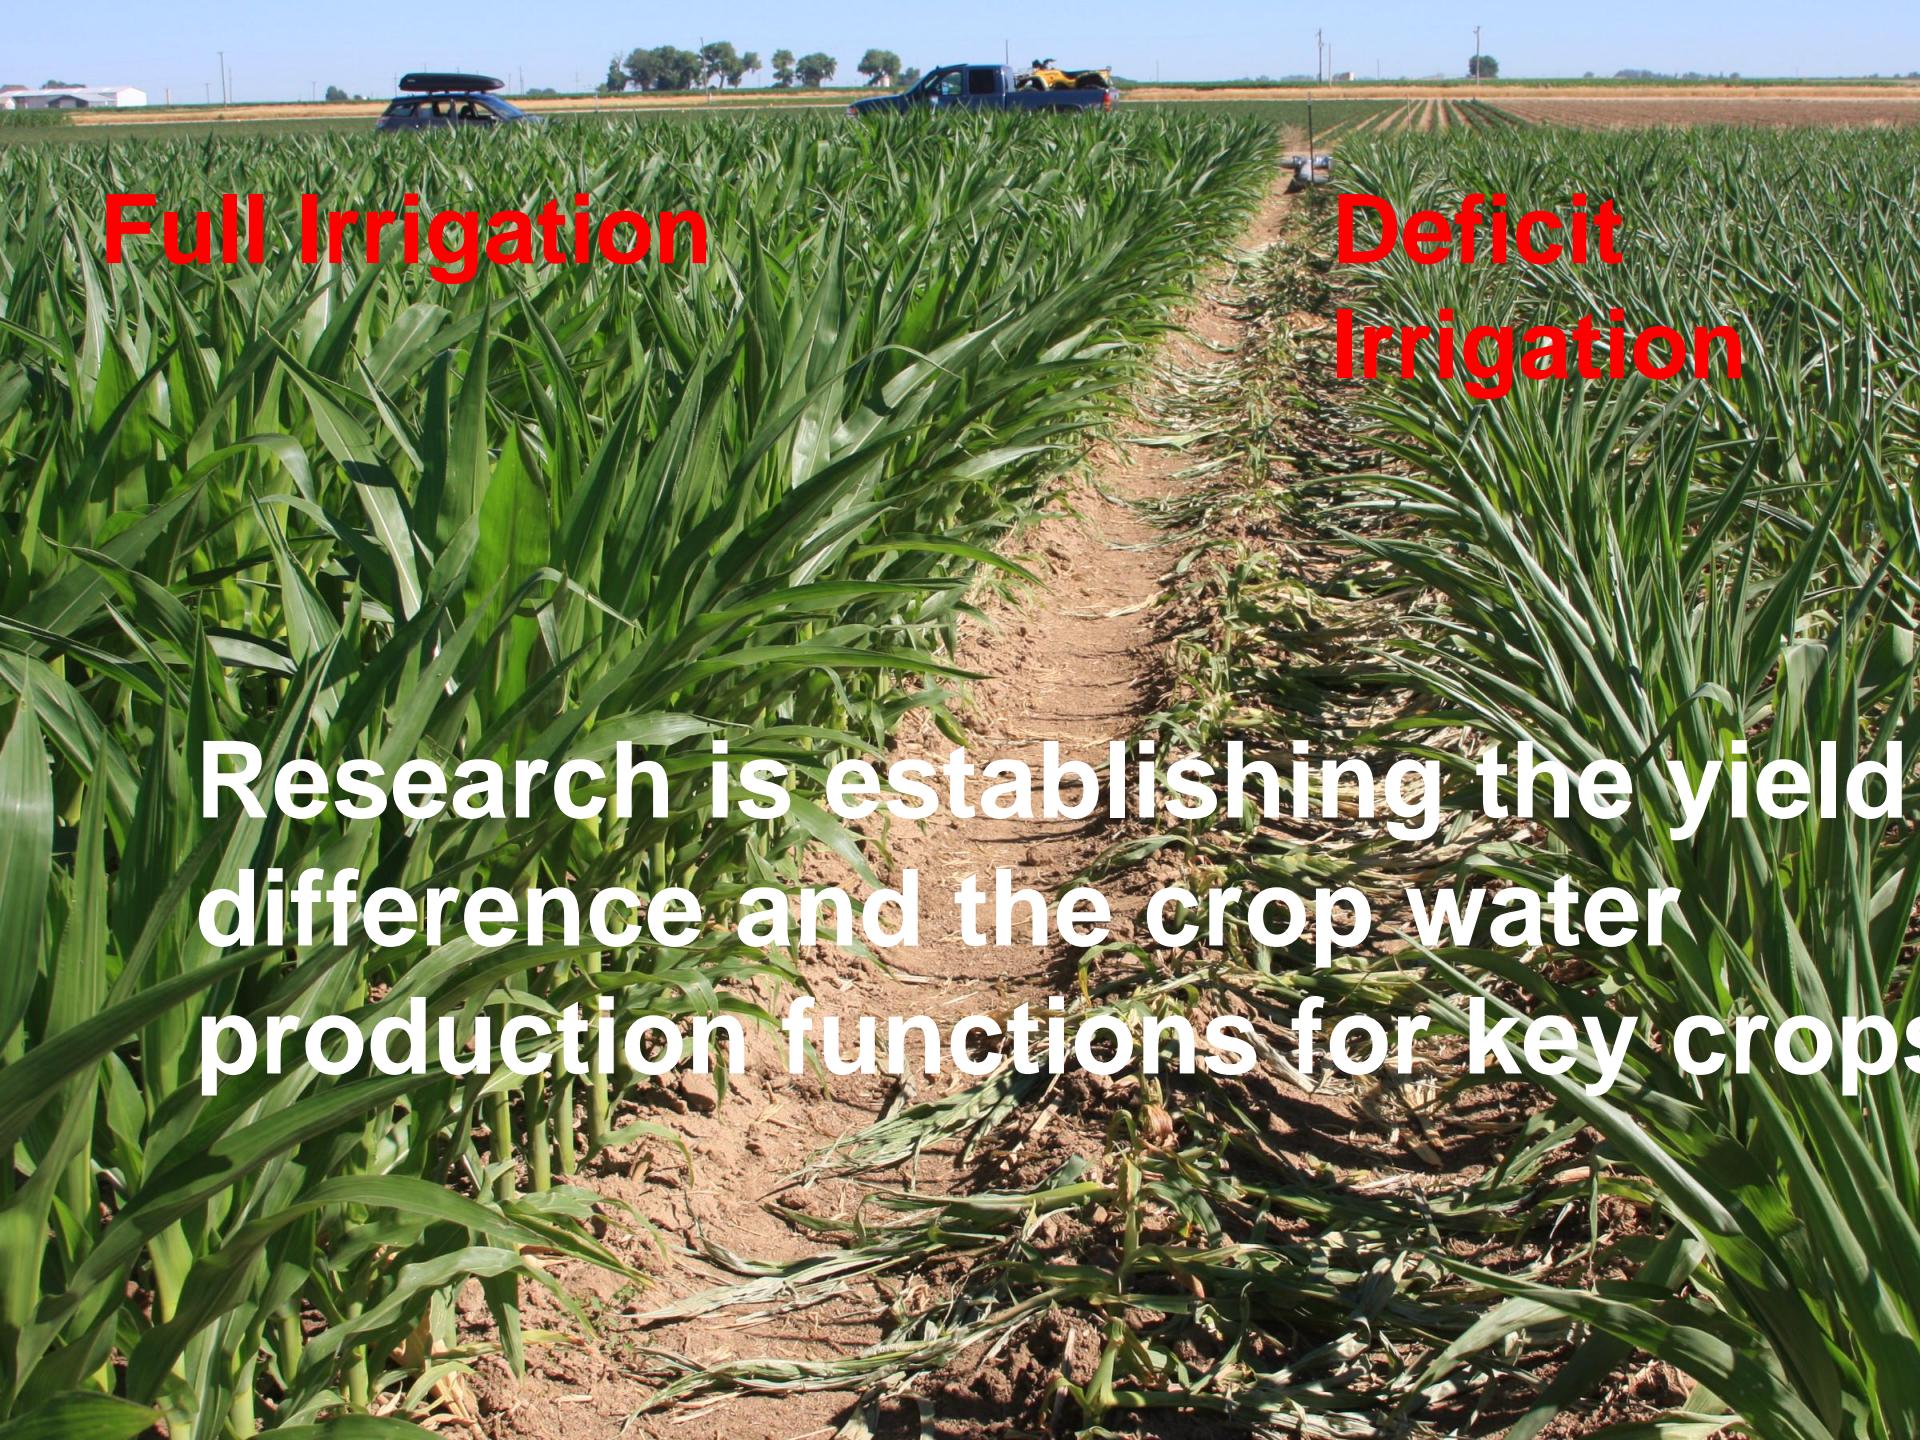

Graphic provided by Campbell Scientific

A vertical array of soil moisture sensors.

Flumes for water delivery and return flow measurements.

site - August 2010**

SWIIM™ Instrumentation Architecture

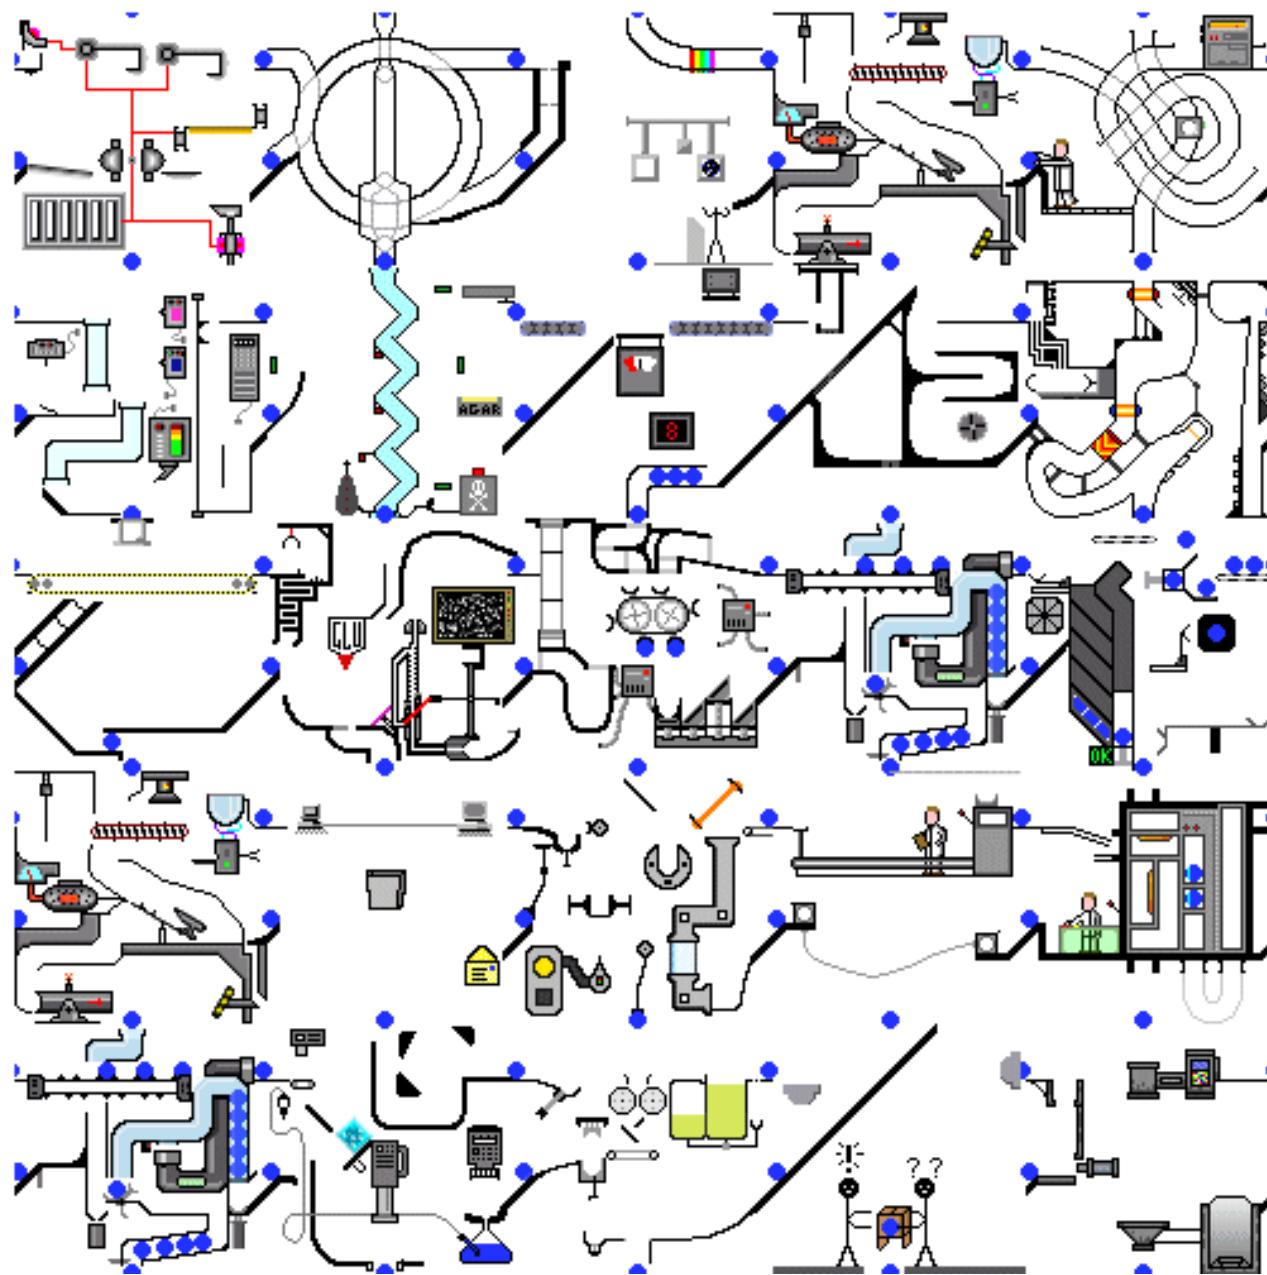

Spring 2013 proof of concept strategy:

- Procuring and installing instrumentation on farms on the South Platte River in Colorado.
- Building a small transferable CU water block.
- Transferring water in Spring 2013 as validation and proof of concept.
 - Politics
 - Sociology

Summarizing:

The following graphic will make everything perfectly clear and understandable ...

Obrigado!
